

Quant Daily Digest

■ Daily Overview

Macro & Sentiment: Retail traders capped 2025 with one of their strongest years ever, fueling increased market participation and gains. Their current buying focus has shifted decisively toward energy stocks, reflecting optimism in the sector amid rising oil prices and geopolitical tensions. However, renewed US tariff concerns triggered a sharp sell-off in Indian equities, with the Sensex dropping 800 points and the Nifty breaking key technical support. This suggests heightened risk aversion in EM markets, despite robust domestic earnings prospects. Motilal Oswal's forecast of 8% YoY growth in Nifty Q3 earnings—the strongest in two years—underscores a fundamental recovery led by oil & gas, autos, and NBFCs, partially offsetting tariff-related fears.

Equities / Rates: Indian markets remain under pressure from external policy risks, with technical breakdowns inviting short-term selling. Fund flows show rotation as Helios Flexi Cap Fund exits IndiGo and Urban Company, reallocating capital into Physicswallah, Adani Ports, and 23 other stocks, signaling a tactical shift toward growth and infrastructure plays. In the US, mortgage rates have dropped to nearly three-year lows following Trump's directive for \$200 billion in mortgage bond purchases, likely supporting housing demand and fixed income markets. Bitcoin's retreat toward \$90,000 amid cautious positioning ahead of US jobs data and a Supreme Court tariff ruling highlights ongoing volatility in crypto.

FX & Commodities: Energy sector strength is driving retail interest, consistent with elevated oil prices amid geopolitical tensions, including Trump's assertive stance on Greenland. This may sustain commodity price support and USD strength in risk-off episodes.

What to Watch:

- US January jobs report and Supreme Court tariff ruling for market direction and risk sentiment.
- Indian equity technical levels and tariff policy developments for EM risk appetite.
- Retail flow dynamics into energy stocks and implications for sector rotation.

■ Hot List

Retail traders had one of their best years ever in 2025. Here's what they're buying now

Retail traders experienced one of their strongest years in 2025, marked by significant gains and increased market participation. Following this momentum, retail investors are currently concentrating their buying power on energy stocks, particularly those linked to oil and gas sectors. This shift reflects expectations of sustained energy demand and potential price appreciation amid ongoing geopolitical and supply considerations. The increased retail inflows into energy equities could influence sector price dynamics and volatility. Market participants should monitor retail positioning as a potential driver of short-term price movements in energy-related assets.

CNBC

Sensex slips 800 points and Nifty sees a decisive breakdown. Can investors ignore Trump to buy the dip?

The Indian stock market experienced a sharp decline with the Sensex dropping 800 points and the Nifty breaking critical technical support levels. This sell-off was driven by renewed concerns over US tariff policies, which heightened geopolitical risks and dampened market momentum. Despite the short-term weakness and cautious analyst sentiment, long-term fundamentals of the Indian economy remain

supportive. Market participants are advised to exercise caution amid increased volatility and uncertain global trade dynamics. The breakdown in key indices suggests potential for further downside before any meaningful recovery.

The Times of India

Helios Flexi Cap Fund exits IndiGo, Urban Company; hikes stakes in Physicswallah, Adani Ports, and 23 stocks

Helios Flexi Cap Fund exited its entire positions in IndiGo and Urban Company in December, signaling a strategic shift away from these stocks. The fund notably increased its stake in Physicswallah by over 2.1 million shares, indicating strong conviction in the education sector. Additionally, Helios raised exposure in 23 other stocks, including significant holdings in Adani Ports and Reliance Industries (RIL). This reallocation suggests a preference for diversified sectors with potential growth and stability. The fund's moves may impact market flows and positioning in these mid-to-large cap stocks.

NFO Alert: Bandhan Mutual Fund launches Arudha SIF's maiden strategy with Hybrid Long-Short Fund

Bandhan Mutual Fund has launched the Arudha Hybrid Long-Short Fund, the maiden strategy of Arudha SIF, targeting sophisticated investors. The fund employs an interval strategy combining debt, money market instruments, and market-neutral equity arbitrage to optimize returns while managing risk. This hybrid approach aims to deliver stable post-tax returns with lower volatility compared to traditional equity funds. The fund's market-neutral equity component is designed to capitalize on arbitrage opportunities, potentially appealing to quant-driven strategies focused on relative value and risk-adjusted performance. The launch reflects growing interest in hybrid long-short strategies within the Indian mutual fund space.

Motilal Oswal sees 8% YoY growth in Nifty Q3 earnings; SBI, Eternal among 5 top ideas

Motilal Oswal projects an 8% year-on-year growth in Nifty Q3 earnings, the strongest in eight quarters, signaling a robust earnings recovery. Key sectors driving this growth include oil and gas, automobiles, and NBFCs, reflecting sectoral strength and potential market leadership. Among top stock picks, SBI and Eternal stand out, indicating confidence in their earnings momentum and market positioning. This forecast suggests positive earnings momentum that could influence market flows and positioning in these sectors and stocks. The data points highlight a favorable earnings environment, potentially supporting bullish market sentiment in the near term.

Bitcoin drops towards \$90,000 as traders await US jobs data and Supreme Court ruling on global tariffs

Bitcoin declined towards \$90,000, with Ethereum stabilizing near \$3,150, as traders awaited critical US jobs data and a Supreme Court decision on global tariffs. Market participants are cautious amid ongoing ETF inflows, geopolitical tensions, and technical resistance levels that have capped upside momentum. The pause in price action suggests consolidation, reflecting uncertainty in macroeconomic policy and regulatory developments. These factors are influencing positioning and flow dynamics in the crypto market, with investors closely monitoring upcoming data and rulings for directional cues. Overall, the market is in a holding pattern pending these key events.

Ken Griffin's Citadel Sells Amazon Shares for This AI Stock That Soared 1,000% in Two Years

In Q3, Ken Griffin's Citadel Advisors significantly reduced its Amazon holdings by selling 1.6 million shares. Concurrently, the firm increased its position in Palantir Technologies, acquiring 388,000 shares despite the stock's high valuation. Palantir has experienced a remarkable 1,000% price surge over the past two years, indicating strong investor interest in AI-related equities. This shift highlights Citadel's strategic reallocation from a tech giant to a high-growth AI-focused stock, reflecting broader market trends favoring AI innovation. The move may signal changing sentiment and positioning among major quant and institutional investors toward AI plays.

International Business Times

Jim Cramer Says “I Really Like Robinhood for a Long-Term Story”

Jim Cramer expressed a positive long-term outlook on Robinhood Markets (NASDAQ: HOOD), highlighting it as a favorable investment story. Despite recent volatility in the stock, Cramer's endorsement could influence retail investor sentiment and potentially impact trading volumes. Robinhood's inclusion in the S&P 500 and Nasdaq-100 indexes adds to its market relevance, attracting institutional flows and index fund participation. The stock's price action may see increased interest as Cramer's commentary often sways momentum-driven trading strategies. Overall, this endorsement could contribute to improved positioning and inflows in HOOD shares.

Mortgage rates drop to lowest level in nearly 3 years as Trump orders buying of \$200 billion in mortgage bonds

Mortgage rates have fallen to their lowest level in nearly three years following President Donald Trump's directive for Fannie Mae and Freddie Mac to purchase \$200 billion in mortgage bonds. This substantial bond-buying program aims to support the housing market by increasing liquidity and

lowering borrowing costs. The move is expected to stimulate mortgage lending and potentially boost home sales. Market participants are closely watching the impact on mortgage-backed securities (MBS) spreads and overall fixed-income flows. The policy intervention signals aggressive government support to stabilize and invigorate the housing finance sector.

Trump says oil companies will spend \$100 billion in Venezuela with U.S. protection

Former President Trump announced that U.S. oil companies plan to invest \$100 billion in Venezuela's oil sector, contingent on receiving protection from the U.S. government. This statement comes amid ongoing concerns about Venezuela's political instability and security risks, which have previously deterred significant foreign investment. The commitment signals potential increased U.S. involvement in Venezuelan energy assets, possibly impacting global oil supply dynamics. Market participants may monitor shifts in Venezuelan oil production forecasts and geopolitical risk premiums. The announcement could influence energy sector flows and positioning, especially in oil futures and related equities.

OpenAI and SoftBank announce \$1 billion investment in SB Energy as part of massive AI buildout

OpenAI and SoftBank have jointly committed \$1 billion to SB Energy, a SoftBank-backed renewable energy provider, to support the expansion of AI data centers. This investment aligns with the growing demand for sustainable energy solutions amid the rapid buildout of AI infrastructure. The funding is expected to enhance SB Energy's capacity to supply clean power, addressing the significant energy consumption of AI operations. Market implications include potential increased demand for renewable energy stocks and related infrastructure firms. This move highlights the intersection of AI growth and energy sector investments, signaling a strategic shift toward sustainable tech development.

S&P; 500 notches record high close driven by Broadcom, other chipmakers

U.S. equities closed at record highs, with the S&P; 500 up nearly 0.65%, the Dow gaining about 0.5%, and the Nasdaq rising 0.8%, driven by strong performances in AI-related stocks and a broadening rally into materials and industrials. Broadcom shares rose over 3.5%, while Intel surged nearly 11% following positive remarks from President Trump about a meeting with Intel's CEO. Meta Platforms' long-term power purchase agreements boosted Vistra's shares by 10.5%. Despite slower-than-expected December job growth, the unemployment rate fell to 4.4%, indicating a resilient labor market. Market breadth and sector rotation suggest sustained momentum beyond just tech and AI stocks.

Stock Market Today, Jan. 9: Applied Digital Jumps as Investors Reprice AI Infrastructure Growth

On January 9, 2026, Applied Digital's stock experienced a significant jump as investors repriced the company's growth prospects in AI infrastructure. The surge was driven by accelerating AI-related revenue and improved visibility into contracts with hyperscalers, signaling stronger future cash flows. This price action reflects heightened market enthusiasm for AI infrastructure plays amid broader tech sector momentum. The move suggests increased positioning in AI growth stocks, potentially influencing sector rotation and quant models focused on thematic exposure. Overall, Applied Digital's rally underscores the market's focus on AI-driven earnings acceleration and contract clarity.

Stock Market Today, Jan. 9: NuScale Power Jumps After Bank of America Upgrade

NuScale Power shares surged following a Bank of America upgrade, signaling renewed investor confidence in the nuclear power sector. The upgrade was accompanied by a notable increase in options trading volume, indicating heightened speculative interest and potential positioning shifts among market participants. This activity reflects broader market enthusiasm for clean energy growth stories amid evolving policy landscapes. The S&P; 500, Nasdaq, and Dow Jones showed mixed reactions, with NuScale's jump standing out as a sector-specific catalyst. Investors are closely watching how such upgrades and flow dynamics influence energy sector valuations and momentum in early 2026.

Stock Market Today, Jan. 9: Intel Surges After Trump Praises CEO Lip-Bu Tan and Touts U.S. Chip Leadership

On January 9, 2026, Intel shares surged following former President Trump's public endorsement of CEO Lip-Bu Tan and his emphasis on U.S. semiconductor leadership. The rally was supported by Intel's advancement in 1.8 nanometer CPU technology, signaling strong product momentum. This positive sentiment contributed to increased market interest in chipmakers, reflecting broader optimism in the semiconductor sector. The endorsement and technological progress may influence positioning and flows into U.S. tech equities, particularly in semiconductors, amid ongoing geopolitical focus on domestic chip manufacturing. Market participants are likely monitoring Intel's developments as a barometer for sector strength.

Industrial Adhesives Market Size to Worth USD 152.07 Billion by 2035

The global industrial adhesives market is projected to grow from USD 77.68 billion in 2026 to USD 152.07 billion by 2035, reflecting a compound annual growth rate (CAGR) of 7.75%. This robust expansion indicates strong demand trends in sectors reliant on adhesives, potentially impacting related equities and commodity flows. Market participants and quant models may consider exposure to industrial materials and chemical sectors, factoring in growth-driven price momentum and sector rotation. The forecasted growth could influence supply chain dynamics and investment positioning in manufacturing and construction industries. Monitoring policy developments and raw material costs will be critical for risk assessment.

Sebi pushes deadline to March 1 for implementing additional incentive structure for mutual fund distributors

Sebi has extended the deadline for mutual fund distributors to implement additional incentive structures to March 1, 2026, citing operational challenges. These incentives are designed to boost investments from new investors in 30 cities and new women investors, aiming to expand market penetration in underrepresented segments. Other provisions from the November 2025 circular remain unchanged. This extension may impact distributor behavior and fund flows, potentially delaying increased retail participation from targeted demographics. Market participants should monitor changes in distributor incentives as they could influence mutual fund inflows and sector positioning.

Trump: ‘We are going to do something on Greenland whether they like it or not’

Former President Trump stated the U.S. will take action on Greenland, citing concerns that Russia or China might otherwise gain control of the Danish island. This geopolitical assertion could influence market sentiment around defense stocks and commodities linked to Arctic resources. Investors may monitor shifts in U.S. military spending or strategic asset allocations in the Arctic region. The statement underscores potential geopolitical risks that could impact currency flows, particularly the Danish krone and U.S. dollar, as well as broader NATO-related defense equities. Market participants should watch for policy moves or announcements regarding Arctic investments or military deployments.

Investing with gifs: a visual guide

The FT Alphaville article "Investing with gifs: a visual guide" explores the concept of meme reversion in financial markets, highlighting how meme stocks and assets driven by social media hype often experience sharp reversals. It emphasizes the importance of understanding market sentiment and positioning shifts that can lead to rapid price corrections. The piece suggests that quant strategies incorporating sentiment analysis and flow data could better navigate these volatile meme-driven moves. Overall, it underscores the growing influence of retail investor behavior and social media dynamics on asset price action and market positioning.

If a jobs report leaks on a social media platform no one uses, does it move the market?

An FT Alphaville article explores the impact of leaked jobs reports on market movements, particularly when leaks occur on obscure social media platforms. It questions whether such leaks influence market pricing or trading volumes, given limited audience reach. The piece highlights the importance of data dissemination channels and market participants' access to information for price discovery. It suggests that leaks on less-followed platforms may have muted effects compared to those on mainstream channels, affecting the speed and magnitude of market reactions. This insight is relevant for quant strategies relying on alternative data sources and real-time information flows.

Did Taylor Swift give UK GDP a big boost? Sorry, we still have no idea

The FT Alphaville article examines whether Taylor Swift's UK concerts significantly boosted local GDP, concluding that the economic impact remains unclear. While large events like Swift's shows can increase spending in hospitality and transport sectors, isolating their effect on overall GDP is challenging due to data limitations and confounding factors. The piece highlights the difficulty in quantifying localized growth impacts from entertainment events, noting that short-term boosts may not translate into sustained economic gains. For market participants, this underscores the complexity of linking cultural events to macroeconomic indicators or consumer spending trends. No definitive data-driven conclusions on policy or flows emerge from the analysis.

How Data Analytics Supports Smarter Stock Trading Strategies

Data analytics is increasingly integral to stock trading, enabling traders to base decisions on empirical evidence rather than intuition. By leveraging large datasets and advanced algorithms, market participants can identify patterns, optimize entry and exit points, and manage risk more effectively. This approach enhances discipline in trading strategies, reducing emotional biases and improving consistency in returns. Quantitative models powered by data analytics also facilitate real-time adjustments to market conditions, supporting more adaptive and responsive trading. Overall, data-driven strategies contribute to smarter, more efficient market participation.
