

Quant Daily Digest

■ Daily Overview

Macro & Sentiment Markets exhibit cautious risk appetite amid persistent inflationary pressures in the U.S., with consumer prices rising notably in travel, recreation, and food sectors ahead of the Memorial Day weekend. This inflation stickiness is tempering consumer spending optimism. Geopolitical risk remains elevated as reports suggest a near-finalized Iran deal to reopen the Strait of Hormuz, a key oil transit chokepoint, potentially easing Middle East tensions but still subject to political uncertainty. Meanwhile, South Korea's intensified crypto market policies signal growing institutional acceptance in Asia, supporting a cautious but constructive tone in digital assets. Equities / Rates Multi-asset funds show wide performance dispersion (3.3% to 24.6%) over the past year, reflecting divergent tactical positioning amid volatility. This suggests active managers are capitalizing on market dislocations, while passive strategies may lag. Rates markets remain sensitive to inflation data and geopolitical developments, with implied volatility elevated but contained. No major central bank moves today, but markets are digesting inflation persistence and geopolitical developments. FX & Commodities Crypto markets are consolidating after recent gains; Bitcoin hovers near \$77,700, just above critical support around \$76,000–76,500, while Ethereum lags at ~\$2,130, struggling to break key resistance. This signals cautious investor sentiment amid a slowing crypto recovery. Oil markets remain watchful of Strait of Hormuz developments, with potential supply risk premiums still priced in. FX markets show modest risk-off bias, with safe havens holding steady. What to Watch • U.S. inflation data and consumer spending trends post-holiday weekend • Iran deal progress and implications for Strait of Hormuz security and oil flows • Adoption and market impact of AI-driven trading tools, including AriseAlpha's new signal-driven bot across crypto, stocks, and FX

■ Hot List

AriseAlpha Introduces AI Trading Bot With Signal-Driven Automation Across Crypto, Stocks, and Forex

AriseAlpha has launched an AI trading bot featuring signal-driven automation tailored for crypto, stock, and forex markets. The bot aims to enhance trading efficiency by leveraging advanced AI algorithms to analyze market signals and execute trades automatically. This innovation targets investors seeking data-driven, automated strategies across multiple asset classes, potentially improving responsiveness to market movements and reducing manual intervention. The integration of AI in trading aligns with growing trends in quant strategies and algorithmic trading, offering enhanced precision and speed in execution. Market participants may see shifts in flow dynamics as adoption of such technology increases.

Bitcoin holds near \$77,700, Ethereum near \$2,130 as crypto market recovery slows

Bitcoin is trading near \$77,700, holding just above a critical support zone between \$76,000 and \$76,500, indicating cautious investor sentiment. Ethereum is weaker relative to Bitcoin, hovering

around \$2,130 and struggling to break key resistance levels. The overall crypto market capitalization has seen a slight decline, reflecting a slowdown in the recent recovery momentum. Market participants remain watchful as both major cryptocurrencies face resistance, suggesting limited upside in the near term. Positioning appears cautious with potential for increased volatility if support levels are breached. [Read more: https://economictimes.indiatimes.com/markets/cryptocurrency/bitcoin-holds-near-77700-et-hereum-near-2130-as-crypto-market-recovery-slows/articleshow/131256603.cms](https://economictimes.indiatimes.com/markets/cryptocurrency/bitcoin-holds-near-77700-et-hereum-near-2130-as-crypto-market-recovery-slows/articleshow/131256603.cms)

The Times of India

Multi-asset funds reward tactical bets amid volatile market

Multi-asset allocation funds exhibited significant performance dispersion in the past year, ranging from 3.3% to 24.6%, reflecting varied tactical positioning amid market volatility. Investors increased allocations to these funds due to challenges in asset allocation during turbulent conditions. Top-performing funds notably benefited from overweight positions in precious metals like gold and silver, which outperformed other asset classes. This suggests that tactical asset shifts towards safe-haven commodities were rewarded. The data highlights the importance of dynamic asset allocation and active management in multi-asset strategies during uncertain market environments. Crypto in Asia: Why South Korea Is Doubling Down on the Crypto Market in 2026

South Korea is intensifying its focus on the cryptocurrency market in 2026, transitioning from viewing digital coins as mere consumer novelties to integral components of its financial ecosystem. The government is implementing policies to support crypto trading and blockchain innovation, aiming to boost market liquidity and attract institutional participation. This strategic shift is expected to influence trading volumes and price stability in the region, potentially increasing South Korea's role in global crypto flows. Enhanced regulatory clarity and infrastructure development may also impact market positioning and algorithmic trading strategies targeting Asian crypto assets.

Americans are feeling inflation's pinch into the holiday weekend. Here's where prices are rising the most

Inflation pressures persist in the U.S. as prices for travel, recreation, and food have risen sharply heading into the Memorial Day weekend, impacting consumer spending. Data indicates notable increases in airfare, hotel rates, and dining costs, signaling sustained inflation in key discretionary spending categories. This trend could influence market expectations for consumer demand and inflation trajectory in the near term. Elevated prices may also affect positioning in consumer discretionary stocks and sectors tied to travel and leisure. Market participants should monitor upcoming inflation data and consumer sentiment for potential shifts in policy outlook and asset allocation.

Trump says Iran deal reopening Strait of Hormuz 'largely negotiated,' will be announced soon

Former President Trump stated that reopening the Strait of Hormuz under the Iran deal is "largely negotiated" and will be announced soon. The Strait, a critical oil transit chokepoint, has seen heightened tensions and skirmishes since a fragile ceasefire began on April 8. Market participants are closely watching developments, as any resolution could ease geopolitical risk premiums on oil prices and reduce volatility in energy markets. The announcement may influence crude futures and regional risk sentiment, impacting flows in energy-related assets and currencies sensitive to Middle East stability. Positioning in oil and safe-haven assets could adjust ahead of the formal deal announcement.

Spirit's collapse, high fuel prices test limits of summer vacation spending

Spirit Airlines' recent collapse highlights the strain on summer travel amid soaring fuel prices, testing consumer willingness to pay higher fares. Memorial Day weekend serves as a critical gauge for demand elasticity in air travel, with ticket prices rising due to increased operational costs. Elevated fuel expenses are pressuring airlines' margins, potentially leading to reduced capacity or higher ticket prices. Market participants are closely monitoring booking trends and airfare data to assess the resilience of travel demand and its impact on airline stocks and related sectors. This dynamic could influence positioning in travel and energy-related equities.

Iridium, Planet Labs, and Ziff Davis Shares Skyrocket, What You Need To Know

Shares of Iridium, Planet Labs, and Ziff Davis surged in the afternoon session, coinciding with the Dow Jones Industrial Average rising over 300 points to briefly surpass 50,700, marking a new all-time high. The rally was supported by improving market sentiment driven by declining bond yields, which typically boost equities by lowering borrowing costs and increasing risk appetite. This positive momentum suggests increased investor confidence and potential shifts in positioning towards growth and tech-related stocks. The yield drop and equity gains highlight a favorable environment for risk assets, with notable volume spikes in these specific names indicating strong buying interest.

SAIC, Mirion, and PAR Technology Stocks Trade Up, What You Need To Know

The Dow Jones Industrial Average surged over 300 points, briefly surpassing a new all-time high above 50,700, driven by improved market sentiment amid declining yields. This positive momentum lifted several stocks, including SAIC, Mirion, and PAR Technology, which saw notable price gains in the afternoon session. The yield drop likely eased concerns over borrowing costs, encouraging risk-on flows into equities. The broad market rally reflects a shift in positioning as investors respond to easing

financial conditions. These dynamics suggest increased appetite for growth and tech-related stocks in the current environment.

Ingram Micro and Rumble Shares Skyrocket, What You Need To Know

Ingram Micro and Rumble shares surged significantly during the afternoon session, contributing to a broader market rally. The Dow Jones Industrial Average gained over 300 points, briefly surpassing a new all-time high above 50,700. This positive price action was supported by improving market sentiment amid declining bond yields, which often encourage equity buying. The rally reflects increased investor appetite and potential shifts in positioning favoring growth and tech-related stocks. These dynamics suggest a favorable environment for momentum-driven strategies and highlight the impact of yield movements on equity flows.

OSI Systems, Amphenol, and Zebra Shares Skyrocket, What You Need To Know

Shares of OSI Systems, Amphenol, and Zebra Technologies surged in the afternoon session, coinciding with the Dow Jones Industrial Average rising over 300 points to briefly surpass a new all-time high above 50,700. The rally was driven by improved market sentiment amid declining bond yields, which typically supports equities by lowering discount rates on future earnings. This positive momentum suggests increased investor risk appetite and potential rotation into tech and industrial sectors. The price action reflects a favorable environment for growth stocks, with flows likely shifting from fixed income to equities. Market positioning appears to be adjusting to a lower yield regime, boosting valuations.

Insight Enterprises and Arlo Technologies Shares Are Soaring, What You Need To Know

Shares of Insight Enterprises and Arlo Technologies surged in the afternoon session, coinciding with the Dow Jones Industrial Average gaining over 300 points and briefly surpassing a new all-time high above 50,700. The rally was supported by improving market sentiment driven by declining bond yields, which often boosts risk appetite. This positive momentum helped lift various stocks, reflecting a broader risk-on environment. The yield drop likely influenced positioning, encouraging investors to rotate into equities, particularly in tech and enterprise sectors. The price action indicates a strong correlation between fixed income movements and equity market performance in the current environment.

Kraken El Niño is coming for the crops

The article highlights the potential impact of a strong El Niño event on global crop production, emphasizing increased risks of droughts and floods in key agricultural regions. Market participants should monitor weather data closely, as disruptions could lead to significant volatility in agricultural commodity prices, particularly grains and softs. The anticipated El Niño may affect supply chains and crop yields, influencing futures markets and positioning strategies. Traders and quant models should incorporate updated climate forecasts to adjust risk assessments and hedge accordingly. This event could trigger notable shifts in commodity flows and speculative activity in related markets.

convert-to-quant 1.2.4

The release of convert-to-quant version 1.2.4 introduces the capability to convert safetensors weights into quantized formats such as FP8 and INT8. This update includes learned rounding optimization, which can enhance the precision and efficiency of quantized models. For quant-focused market participants, this tool may improve the performance of machine learning models used in trading algorithms by reducing computational load while maintaining accuracy. The availability on PyPI facilitates easy integration into existing quant workflows. This development could influence the deployment speed and cost-effectiveness of AI-driven trading strategies.

amazingvmsloth 0.3.2

The release of amazingvmsloth 0.3.2 on PyPI.org introduces a highly efficient tool for fine-tuning large language models (LLMs) with minimal VRAM usage. Key features include multi-GPU support, manual LoRA gradient control, flash attention, and 4-bit quantization, enhancing performance and reducing computational costs. The addition of a web dashboard facilitates easier monitoring and management of the fine-tuning process. These advancements could accelerate AI model development and deployment, potentially impacting quant strategies reliant on rapid model iteration and low-latency inference. The tool's efficiency gains may influence data flow and computational resource allocation in quant trading environments.

amazingvmsloth 0.3.1

The release of amazingvmsloth 0.3.1 on PyPI.org introduces a high-performance tool for fine-tuning large language models (LLMs) with minimal VRAM usage. Key features include multi-GPU support, manual LoRA gradient control, flash attention, 4-bit quantization, and a web dashboard for monitoring. These enhancements enable more efficient and scalable model training, potentially reducing computational costs and accelerating deployment. The 4-bit quantization and flash attention are particularly relevant for quant strategies and algorithmic trading models that rely on rapid, low-latency data processing. This tool could influence market data analytics and AI-driven trading systems by

optimizing resource usage.

zse-engine added to PyPI

The zse-engine, a zero-dependency large language model (LLM) inference engine, has been added to PyPI. It boasts the fastest cold start times and the smallest VRAM footprint, supporting CUDA, ROCm, and Metal platforms. This development could impact quant strategies relying on LLMs by enabling more efficient model deployment and inference with lower hardware requirements. The engine's cross-platform compatibility may facilitate broader adoption in algorithmic trading systems and data analysis workflows. No direct market price action or policy changes are indicated.

zse-compiler added to PyPI

The zse-compiler, a pure-Python GPU kernel compiler, has been added to PyPI. It enables developers to write GPU kernels in Python and target multiple platforms including CUDA, ROCm (HIP), and Metal, all with zero dependencies. This tool could streamline GPU programming workflows, potentially impacting quant and market data processing by simplifying custom kernel development. Its cross-platform support may enhance computational efficiency in trading algorithms and data analysis. The release may influence adoption trends in GPU-accelerated financial modeling and algorithmic trading systems.

DeepSeek founder declares AGI as the goal as \$10bn funding round advances

DeepSeek, led by founder Liang Wenfeng, is pursuing Artificial General Intelligence (AGI) as its primary objective amid a \$10 billion funding round. The Hangzhou-based lab plans to focus on frontier research rather than immediate revenue generation, signaling a long-term commitment to breakthrough AI development. This marks DeepSeek's first external capital raise, indicating a strategic shift towards scaling its research capabilities. The substantial funding round highlights strong investor confidence in AGI's potential and could influence AI sector valuations and capital flows. Market participants should watch for impacts on AI-related equities and venture funding trends.

rawr-tools 0.1.5

The release of rawr-tools 0.1.5 on Pypi.org introduces an AI-driven quantitative trading tool specifically designed for the Korean stock market. This tool, named RAWR (Risk And Win Ratio), aims to enhance trading strategies by optimizing risk management and win ratios through advanced AI algorithms. Its focus on the Korean market suggests potential improvements in handling local market data, price action, and positioning. The tool could be valuable for quants seeking to refine their models with AI insights tailored to regional market dynamics. This update may influence trading flows and strategy

development in Korean equities.

Stephen Colbert returns to TV in appearance on local Michigan station

Stephen Colbert made a surprise return to television by hosting a local Michigan station show just one day after his final episode of “The Late Show” on CBS. This unexpected move highlights a unique media event but has no direct implications for financial markets, asset prices, or trading flows. There are no reported changes in policy, market positioning, or quant-relevant data points linked to this appearance. The event is primarily of entertainment and cultural interest rather than market impact.

‘Blue dot fever’? What's really behind a tricky summer dynamic for live music

Live music ticket prices have surged amid rising overall inflation, leading consumers to be more selective with concert spending this summer. Despite higher prices, demand remains resilient but shows signs of moderation as fans prioritize events, impacting ticket sales velocity and secondary market pricing. Promoters and venues are adjusting supply and pricing strategies to balance attendance and revenue, reflecting shifts in consumer discretionary spending patterns. This dynamic influences flow patterns in entertainment equities and related sectors, with potential volatility in stocks tied to live events and ticketing platforms. Market participants should monitor consumer sentiment and pricing elasticity in this space.

FTAV’s Friday charts quiz

The FTAV’s Friday charts quiz from Alphaville presents a series of market-related charts designed to test readers’ analytical skills. While the article itself is more educational and interactive, it highlights key data points across various asset classes, including equities, bonds, and currencies. The quiz emphasizes recent price action trends, volatility patterns, and potential policy impacts inferred from market movements. It serves as a tool for quants and market participants to sharpen their data interpretation and positioning strategies. However, it does not provide new market-moving information or specific flow data.

Rachel Reeves would like you to order off the kids’ menu

UK Labour Party leader Rachel Reeves has proposed a policy to extend VAT relief to children's meals, effectively allowing adults to order from the kids' menu without additional tax. This move aims to reduce dining costs amid inflationary pressures but raises concerns about potential revenue losses and administrative complexities. Market participants may anticipate shifts in consumer spending patterns

within the hospitality sector, potentially benefiting family-oriented restaurants. However, the policy's impact on government tax receipts and inflation metrics remains uncertain. Investors should monitor related fiscal policy developments and consumer behavior data for implications on UK consumer discretionary stocks.

A bitcoin miner spent \$860k armouring vehicles for its bosses, a fact for which we have very little context

A bitcoin mining company reportedly spent \$860,000 on armoured vehicles for its executives, raising questions about the security environment and operational risks in the crypto mining sector. This significant expenditure highlights potential concerns over physical threats to key personnel amid volatile market conditions and regulatory scrutiny. The move may reflect broader risk management strategies within the industry, possibly impacting investor sentiment and capital allocation. However, limited context on the rationale or impact of this spending leaves market implications unclear. The news underscores the intersection of crypto asset volatility and operational security costs.

■ Quant Keywords & Mini-Glossary

Support and Resistance Levels — [Price points where assets tend to stop and reverse, indicating key market sentiment zones.]

Volatility — [Measure of price fluctuations over time, indicating market uncertainty or risk.]

Tactical Asset Allocation — [Active adjustment of portfolio weights to exploit short-term market opportunities.]

Safe-Haven Assets — [Investments like gold that retain value during market stress or volatility.]

Risk Premium — [Extra return demanded by investors for taking on additional risk, e.g., geopolitical risk on oil.]

Positioning — [The aggregate stance of investors in markets, reflecting net long or short exposure.]

Flow Dynamics — [Patterns of buying and selling activity influencing price movements and liquidity.]

Yield Curve / Bond Yields — [Interest rates on government bonds across maturities, affecting discount rates and asset valuations.]

Risk Appetite — [Investors' willingness to take on risk, influencing asset allocation between risky and safe assets.]

Momentum Strategies — [Trading approaches that capitalize on continuing trends in asset prices.]

Quantization (FP8, INT8) — [Reducing numerical precision in models to improve computational efficiency with minimal accuracy loss.]

Learned Rounding Optimization — [Technique to improve quantized model accuracy by optimizing rounding during quantization.]

Algorithmic Trading — [Automated execution of trades based on predefined rules or AI-driven signals.]

Signal-Driven Automation — [Trading systems that automatically act on detected market signals without manual intervention.]

Order Flow Imbalance — [Disparity between buy and sell orders that can predict short-term price moves.]

Risk-Adjusted Returns — [Performance measure that accounts for the amount of risk taken to achieve returns.]

Demand Elasticity — [Sensitivity of quantity demanded to price changes, important for pricing strategies.]

Discount Rate — [Interest rate used to calculate the present value of future cash flows, influenced by bond yields.]

Market Sentiment — [Overall attitude of investors toward market conditions, affecting buying and selling behavior.]

Flow Patterns — [Trends in capital movement across asset classes or sectors.]

Volatility Surface — [Graph showing implied volatility across different option strikes and maturities.]

Realized vs Implied Volatility — [Comparison of actual past volatility to market-expected future volatility.]

Value at Risk (VaR) — [Statistical measure estimating potential portfolio loss over a given time frame at a confidence level.]

Conditional VaR (CVaR) — [Expected loss exceeding the VaR threshold, capturing tail risk.]

Multi-GPU Support — [Using multiple graphics processors to accelerate model training or inference.]
